A; Title: The 31-kDa precursor of interleukin lalpha is myrist A; Reference number: A4829; MUID: 93348250; PMID: 8346241
A; Contents: annotation; myristylation of lysines
R; Nanduri, V.B.; Hulmes, J.D.; Pan, Y.C.E.; Kilian, P.L.; Stellochim. Biophys. Acta 1118, 25-35, 1991
A; Title: The role of arginine residues in interleukin 1 recept A; Reference number: $19608; MUID: 9210334; PMID: 1837236
A; Contents: annotation; type 1 IL-1 receptor interaction site A; Note: modification of Arg-120 by phenylglyoxal blocks recept R; Clore, G.M.; Gronenborn, A.M.
Submitted to the Brookhaven Protein Data Bank, January 1991
A; Reference number: A50049; PDB: GIIB
A; Contents: annotation; conformation by (13)C- and (1)H-NMR, R; Clore, G.M.; Wingfield, P.T.; Gronenborn, A.M.
Biochemistry 30, 2315-2323, 1991
A; Reference number: A46675; MUID: 91159409; PMID: 2001363
A; Contents: annotation; (1)H-NMR structural determination R; Hazuda, D.J.; Strickler, J.; Simon, P.; Young, P.R.
J. Biol. Chem. 266, 7081-7086, 1991
A; Reference number: A39774; MUID: 91201363; PMID: 2016316
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 R; Finzel, B.C.; Watenpaugh, K.D.; Einspahr, H.M. submitted to the Brookhaven Protein Data Bank, December 1989
A; Reference number: A50016; PDB:111B
A; Contents: annotation; X-ray crystallography, 2.0 angstroms, residues 119
R; Finzel, B.C.; Clancy, L.L.; Holland, D.R.; Muchmore, S.W.; Watenpaugh, F. Mol. Biol. 209, 779-791, 1989
A; Title: Crystal structure of recombinant human interleukin-1beta at 2.0 angstroms
A; Reference number: A44666; MUID:90064532; PMID:2585509
A; Contents: annotation; X-ray crystallography, 2.0 angstroms
C; Comment: This protein lacks a conventional signal sequence for protein ved form of interleukin-1beta, unlike interleukin 1-alpha, is inactive.
C; Comment: Interleukin-1beta precursor is less heavily myristoylated than
 50
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               R:Zsebo, K.M.; Wypych, J.; Yuschenki

Shuck M.E., Eessalu T.E., Tracey D.E., Bienkowski M.J.
"Cloning, heterologous expression and characterizatio interleukin 1 receptor antagonist protein.";
Eur. J. Immunol. 21:2775-2780(1991).
-1- FUNCTION: IL-1RA INHIBITS THE ACTIVITY OF IL-1 BY RECEPTOR. IL-1RA HAS NO IL-1 LIKE ACTIVITY.
-1- SUBCELLULAR LOCATION: SECRETED (ISOFORM 1) OR INT (ISOFORM 2).
-1- ALTERNATIVE PRODUCTS: 2 isoforms; 1 (shown here) produced by alternative splicing.
-1- SIMILARITY: BELONGS TO THE IL-1 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            EMBL; M74294; AAA39309.1; -.

"Cloning of equine interleukin-1 receptor antagonist
determination of its full-length cDNA sequence.";
Am. J. Vet. Res. 59:712-716(1998).
-!- FUNCTION: IL-1RA INHIBITS THE ACTIVITY OF IL-1 BY
RECEPTOR. IL-1RA HAS NO IL-1 LIKE ACTIVITY.
-!- SIMILARITY: BELONGS TO THE IL-1 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SEQUENCE FROM N.A MEDLINE-98285942;

If interleukin-1 beta.";

Gene 129:285-289(1993).

C -!- FUNCTION: PRODUCED BY ACTIVATED MACROPHAGES, IL-1 STIMULATES THYMOCYTE PROLIFERATION BY INDUCING IL-2 RELEASE, B-CELL

C MATURATION & PROLIFERATION, & FIBROBLAST GROWTH FACTOR ACTIVITY.

C IL-1 PROTEINS ARE INVOLVED IN THE INFLAMMATORY RESPONSE, BEING IDENTIFIED AS ENDOGENOUS PYROGENS, AND ARE REPORTED TO STIMULATE THE RELEASE OF PROSTAGLANDIN AND COLLAGENASE FROM SYNOVIAL CELLS.

C -!- SUBUNIT: MONOMER.

C -!- SUBUNIT: MONOMER.

C -!- SUBUNIT: THE SIMILARITY AMONG THE IL-1 PRECURSORS SUGGESTS THAT THE MISCELLANEOUS: THE LACK OF A SPECIFIC HYDROPHOBIC SEGMENT IN THE PRECURSOR SEQUENCE SUGGESTS THAT IL-1 IS RELEASED BY DAMAGED CELLS.

C -!- SIMILARITY: BELONGS TO THE IL-1 FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Match
                                                                                                                                                                                                                                                                                         (BY SIMILARITY).
SUBUNIT: MONOMER (BY SIMILARITY).
DOMAIN: THE SIMILARITY AMONG THE IL-1 PRECURSORS SUGGESTS THAT THE AMINO ENDS OF THESE PROTEINS SERVE SOME AS YET UNDEFINED FUNCTION.
MISCELLANEOUS: THE LACK OF A SPECIFIC HYDROPHOBIC SEGMENT IN THE PRECURSOR SEQUENCE SUGGESTS THAT IL-1 IS RELEASED BY DAMAGED CELLS OR IS SECRETED BY A MECHANISM DIFFERING FROM THAT USED FOR OTHER SECRETORY PROTEINS.
SIMILARITY: BELONGS TO THE IL-1 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                              nitted (JUN-1995) to the EMBL/GenBank/DDBJ databases.
FUNCTION: PRODUCED BY ACTIVATED MACROPHAGES, IL-1 STIMULATES
THYMOCYTE PROLIFERATION BY INDUCING IL-2 RELEASE, B-CELL
MATURATION & PROLIFERATION, & FIBROBLAST GROWTH FACTOR ACTIVITY.
IL-1 PROTEINS ARE INVOLVED IN THE INFLAMMATORY RESPONSE, BEING
IDENTIFIED AS ENDOGENOUS PYROGENS, AND ARE REPORTED TO STIMULATE
THE RELEASE OF PROSTAGLANDIN AND COLLAGENASE FROM SYNOVIAL CELLS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                KCKLQDREQKSLVLASPCVLKALHLLSQEMNREVVFCM-SFVQGEERDNKIPVALGIKDK

                                                                                                                                                                                                        Submitted (MAR-1995) to the EMBL/GenBank/DDBJ databases.

1. Submitted (MAR-1995) to the EMBL/GenBank/DDBJ databases.

2. FUNCTION: PRODUCED BY ACTIVATED MACROPHAGES, IL-1 STIMULATES

3. THYMOCYTE PROLIFERATION BY INDUCING IL-2 RELEASE, B-CELL

4. MATURATION AND PROLIFERATION, AND FIBROBLAST GROWTH FACTOR

5. ACTIVITY. IL-1S ARE INVOLVED IN THE INFLAMMATORY RESPONSE, BEING

6. IDENTIFIED AS ENDOGENOUS PYROGENS, AND ARE REPORTED TO STIMULATE

7. THE RELEASE OF PROSTAGLANDIN AND COLLAGENASE FROM SYNOVIAL CELLS

7. SUBUNIT: MONOMER (By similarity).

7. IDENTIFIED STIMILARITY AMONG THE IL-1 PRECURSORS SUGGESTS THAT THE

8. AMINO ENDS OF THESE PROTEINS SERVE SOME AS YET UNDEFINED FUNCTION.

8. IN SECURSOR SEQUENCE SUGGESTS THAT IL-1 IS RELEASED BY DAMAGED CELLS

9. OR IS SECRETED BY A MECHANISM DIFFERING FROM THAT USED FOR OTHER

9. SIMILARITY: BELONGS TO THE IL-1 FAMILY.

1. SIMILARITY: BELONGS TO THE IL-1 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

"The structure of murine interleukin-1 beta at 2.8-A resolution.";
J. Struct. Biol. 107:189-195(1991).
-!- FUNCTION: PRODUCED BY ACTIVATED MACROPHAGES, IL-1 STIMULATES
THYMOCYTE PROLIFERATION BY INDUCING IL-2 RELEASE, B-CELL
MATURATION & PROLIFERATION, & FIBROBLAST GROWTH FACTOR ACTIVITY.
IL-1 PROTEINS ARE INVOLVED IN THE INFLAMMATORY RESPONSE, BEING
IDENTIFIED AS ENDOGENOUS PYROGENS, AND ARE REPORTED TO STIMULATE
THE RELEASE OF PROSTAGLANDIN AND COLLAGENASE FROM SYNOVIAL CELLS
                                                                                                                                                                                                                                                                                                                                                                                            Gray

THYMOCYTE PRODUCED BY INDUCING IL-2 RELEASE, B-CELL
MATURATION & PROLIFERATION, & FIBROBLAST GROWTH FACTOR ACTIVITY.

IL-1 PROTEINS ARE INVOLVED IN THE INFLAMMATORY RESPONSE, BEING
IDENTIFIED AS ENDOGENOUS PYROGENS, AND ARE REPORTED TO STIMULATE
THE RELEASE OF PROSTAGLANDIN AND COLLAGENASE FROM SYNOVIAL CELLS.

-!- SUBUNIT: MONOMER.

-!- SUBUNIT: MONOMER.

-!- DOMAIN: THE SIMILARITY AMONG THE IL-1 PRECURSORS SUGGESTS THAT THE
AMINO ENDS OF THESE PROTEINS SERVE SOME AS YET UNDEFINED FUNCTION.

-!- MISCELLANEOUS: THE LACK OF A SPECIFIC HYDROPHOBIC SEGMENT IN THE
PRECURSOR SEQUENCE SUGGESTS THAT IL-1 IS RELEASED BY DAMAGED CELLS
OR IS SECRETED BY A MECHANISM DIFFERING FROM THAT USED FOR OTHER
SECRETORY PROTEINS.

-!- SIMILARITY: BELONGS TO THE IL-1 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Wedlock D.N., Goh L.P., Parlane N.A., Buddle B.M.;
